SNU PI Lab

Title size: at least 35 pt

TL;DR

- One large figure, equation or table per slide
- Explain verbally, Avoid continuous text
- Keep it readable (≥25 pt font)

Title size: at least 35 pt

- The main text size should be at least 25 pt.

Title size: at least 35 pt

Make the attached image at least two-thirds of a page.
Add a figure title or a short caption.

SNU PI Lab

Title size: at least 35 pt

Avoid This

Avoid placing multiple images on a single slide unless justified by a specific purpose.

Title size: at least 35 pt

$$\frac{d}{dt}\left(\frac{\partial L}{\partial \dot{\theta}}\right) = \frac{\partial L}{\partial \theta}$$

- When including an equation, apply the same rule as for figures:
  present one or two large equation,
  explain it verbally, and avoid continuous text.

Title size: at least 35 pt

Avoid This

$$\frac{d}{dt}\left(\frac{\partial L}{\partial \dot{\theta}}\right) = \frac{\partial L}{\partial \theta}$$

This slide presents the Euler–Lagrange equation
ddt⁢(∂L∂θ˙)=∂L∂θ\frac{d}{dt}\!\left(\frac{\partial L}{\partial \dot{\theta}}\right)=\frac{\partial L}{\partial \theta}dtd(∂θ˙∂L)=∂θ∂L.
It says the time rate of change of the conjugate momentum equals the generalized force.
Here L(θ,θ˙,t)L(\theta,\dot{\theta},t)L(θ,θ˙,t) is the Lagrangian of the system.
The left term tracks how ∂L∂θ˙\frac{\partial L}{\partial \dot{\theta}}∂θ˙∂L evolves along the trajectory.
The right term measures sensitivity of LLL to θ\thetaθ itself.
If LLL is independent of θ\thetaθ, the momentum is conserved (Noether).
Solutions θ(t)\theta(t)θ(t) extremize the action and give the motion.

Title size: at least 35 pt

- Avoid using more than six lines of small text when presenting information.
- Avoid using more than six lines of small text when presenting information.
